6 **P160 - Electric potential of parallel plates** [Total: 3]

Part 1 [3]

How far apart are two conducting plates that have an electric field strength of $7.00 \times 10^3 \ \mathrm{V/m}$ between them, if their potential difference is 13.0 kV?

$V = Ed$

$13.0 \times 10^3 = 7.00 \times 10^3 \cdot d$

$d = \frac{13.0}{7.00}$

$= 1.86 \ \mathrm{m}$
